Windows Server Stack

I've been running my own Windows domain including smtp/pop3/imap/vss/svn/http services for better than a decade, and frankly, things have never run better. If you want to know how I do it read on...

My intent is to share the technology stack I am currently running on my Windows server. I have been running some form of Windows domain since I began with Windows NT 4.0 some time last century. I migrated to Samba on a Debian powered Macintosh for a few years, then migrated to Active Directory on Windows 2000. Presently I run Windows 2003 x64 Standard Edition R2.

Machine Details...

- Home built computer with Athlon 64 3000+, 2GB RAM, RAID 1 OS drive, RAID 5 Storage drive
- [Windows 2003 x64 Standard Edition R2](#)
- [SQL Server 2005 Standard Edition (32-bit)](#)
- [Argosoft Mail Server .NET](#)
- [Server Side Solutions eWall 4.0](#)
- [Server Side Solutions Paranoid 3.0](#)
- [Grisoft AVG Internet Security Network Edition 7.5](#)
- [Apache HTTPD Server 2.2](#)
- [Apache Tomcat 6](#)
- [Subversion](#)
- [Mozy Pro](#)
