

# Fixing Eclipse Tomcat WTP Startup Issues

The [Eclipse WTP tools](#) seem to have problems when the JDK in use changes. There does not appear to be any UI feature that allows a user to tell the WTP server which JDK to use, causing it to fail to start with various error messages. Thankful to [this blog post](#), I have found a fix that has reliably worked. I keep referring to the page, so thought I'd regurgitate it here...

```
Solution : delete the [WORKSPACE_NAME]\.metadata\.plugins\org.eclipse.debug.core\.launches\
```
